

POWER YOUR EVENT

SOLUTIONS FOR EVENTS, TRADE FAIRS, EXHIBITION AND CONFERENCE CENTERS

House lights down – stage lights on ...

... let the show begin. Every successful event succeeds or fails with a reliable, effectively distributed energy supply. With MENNEKES, as trade fair company, hall operator or event organizer, you ensure energy distribution in professional quality!

As a specialist for industrial plugs and sockets we not only supply the most energy-intensive industries with distribution solutions, we also connect energy, data network technology, and components for modern building control technology for the establishment and extension of an intelligent infrastructure. Because today's exhibition centers and conference centers are no longer purely functional buildings, but rather are characterized simultaneously by modern architecture and

design, we also set standards in the product design of energy distributors.

With our competence in the area of trade fairs and events, we are the right partner for development, production, and planning of individually-optimized energy distribution for events of all types. We advise trade fair companies, stand builders and event organizers, and we are a professional supplier to modern trade fair grounds, multi-functional conference centers, as well as cultural events and sporting events around the world. More energy for your event ...

... with MENNEKES.

We make trade fair halls the stage for the greatest productions

Stationary applications.

Whether trade fair grounds, conference center or event stage – wherever information, presentation or entertainment will be staged for many people, the demand for operationally reliable and robustly configured energy distribution is imperative. Trade fair halls and conference halls are virtually inconceivable "unplugged".

The permanently installed energy supply points within an event area are the basis of an uninterrupted energy supply. Access to this energy supply, as a rule should only be possible for authorized persons, to prevent impermissible power withdrawals, for example. In addition to power supply, stationary solutions for trade fair halls and conference halls must also provide water distribution and network distribution. Since heavy equipment is used at times in the set-up phases, all permanent installations must be designed to be extremely robust and impact-resistant.

Energy distribution in the outdoor area, for example at trade fair grounds, and event grounds must be protected against weather influences, and it must be possible to authorize access to power, water, and the data network. We offer the right solution for every requirement.

For many years MENNEKES plugs and sockets have been performing reliably indoors and outdoors, for example in the outdoor area of Messe Frankfurt, at Landesmesse Stuttgart, for the MCH Group, Exhibition and Congress Center Basel, or at the WDR or ZDF broadcasting institutes.

1

Flush-mounted combinations for power and water connection

- Modern design
- Energy and water available on-site
- Integration in the building architecture
- lockable even when plugs are connected

2

AMAXX® receptacle combinations

- Can be also fitted with data port sockets to individual options
- Colour variants yellow, silver, electric grey, or black
- Easy set-up and extension through modularity
- sealable – fuses (RCD/MCB) central on-site

3

CombiTOWER®

- For indoors and outdoors (protection against weather influences and external effects)
- Robust enclosure
- Available as a closed/lockable enclosure and open
- Available in the colours yellow or silver

Stationary applications for the indoor area

Hall distribution of power, water, and data network.

The proverbial lifeline of an event area is the uninterrupted energy supply. The success of a trade fair or event succeeds or fails with the energy supply. MENNEKES offers individually tailored solutions for the establishment of a future-capable energy structure. We work out solutions together with our customers. For example, AMAXX® enclosures offer the possibility of accommodating network components for the extension or for set-up of small networks. We offer an energy measurement system for the monitoring of energy consumption at trade fairs or events.

The options of combining power and water connections in the form of a wall-mount and flush-mount solution, or as a free-standing solution offer versatile implementation possibilities. For example, as a flush-mount solution in stainless steel that is as robust as it is elegant.

solutions for future energy
infrastructure!

Stationary applications for the outdoor area

Free-standing installation.

Likewise, outdoor areas of trade fair grounds or event halls, must also be supplied with energy, as often these areas are used as additional event space in the same manner that the halls themselves are used for events. To realize the required infrastructure in these areas uses permanent installation solutions that are configured for the special requirements imposed on outdoor use are important.

Protection against weather influences, safeguarding against unauthorized access and vandalism, as well as safe and simple handling by many different and in some cases external technicians, are the top priority aspects that must be in place.

In this area MENNEKES offers a broad portfolio of products that meet the requirements demanded by all of these aspects.

Free-standing solutions are frequently required on spacious trade fair grounds. Here lockable energy posts or pillars in a solid stainless steel enclosure from MENNEKES are the optimal choice.

1

Lockable power posts

- lockable even when plugs are connected
- Protection against weather influences
- Protection against unauthorized access
- Available in different RAL colours

2

Stainless steel distributors

- Protection against weather influences
- Modern design
- Fusing on-site
- Protected against unauthorized access

Stationary applications for the outdoor area

Safeguarded solutions for mounting on walls and poles.

For public buildings, such as trade fair halls, conference halls, and event halls, planners and installers of building technology are particularly called upon to comply with strict regulations and requirements imposed on the building installation. We develop custom solutions on request, for example in halogen-free design and in accordance with DIN EN 61439 for use in public buildings.

With the AMELAN® enclosure material we have products with high mechanical, thermal, and electrical properties that optimally combine high chemical resistance and dimensional stability.

In addition, MENNEKES receptacle combinations can be easily, quickly and securely protected from external effects, wind and weather, and UV radiation with suitable weather protection roofs made of high-quality stainless steel. With the accessories available from MENNEKES even fastening on lamp-posts is no problem.

MENNEKES EverGUM receptacle combinations are ideally suited for outdoor use. The enclosure is made of a solid rubber mixture, has high resistance to disruptive current and tracking, and is available in the colours yellow or black.

1

AMELAN® enclosure material

- Combines high mechanical, thermal and electrical properties with outstanding chemical resistance, as well as dimensional stability
- Available in IP 44 and IP 67
- Colour variants – black, yellow, silver, electric-grey
- Halogen-free design as needed
- Available with fire protection classification in accordance with DIN EN 13501-1:2010

2

MENNEKES EverGUM receptacle combinations

- Signal yellow or black enclosure
- Available in different sizes
- Robust against impacts and the effects of external force

3

Accessories for fastening on lamp-posts

- An individual solution for your particular requirement

Simply take energy to where it is needed!

Indoor and outdoor mobile applications.

An intelligently planned permanent installation and professional quality is the be-all and end-all of every event infrastructure. Mobile solutions are the perfect supplement in this regard; they can be used flexibly to make energy available at every point in trade fair halls or conference centers.

Whether exhibitor, stand builder, event organizer – use of mobile distributors makes it possible to make energy accessible at any point desired in the event facilities. In the set-up phase, and when the trade fair or a conference event is in full-swing, requirements – usually changing requirements – will always be imposed on the power supply, guaranteed. Whether for tools, generators, operation of lighting systems, ventilation, multimedia equipment, stage technology or servers.

Particularly when changing trade fair events event formats are on the agenda at conferences, mobile sub-distribution with MENNEKES solutions really pay off.

1

AMAXX® trade-fair stand combination

- Safe distribution on-site
- Robust enclosure
- On/Off switch can be integrated
- Fusing on-site (for example with fire protection switch in accordance with DIN VDE 0100-420)
- Available with or without supply cable

2

EverGUM trade-fair stand distributor

- Can be integrated in the trade fair stand (walls)
- Available with suspension or hang-up fixture

3

EverBOX® – mobile distributors

- Robust
- Stackable
- Easy handling with integrated handles

4

Mobile EverGUM distributors

- Ground clearance prevents water ingress
- Robust
- Colour – signal yellow
- Available with or without supply cable

Mobile applications for trade fair stands

Suitable distributors for on-site implementation.

Professionals ensure that the mobile distributors are suitable for harsh everyday operation and that they satisfy the rigorous requirements stipulated in BGV A3. For example, the installed SCHUKO® receptacles consistently satisfy the new standard regulations of set out in DIN VDE 620-1 for mobile devices. MENNEKES mobile distributors are impact-resistant, dimensionally stable, weather-resistant, and resistant to aging. For safety of man and machine the energy powerhouses are equipped with protective switches, RCD devices and circuit breakers that are in-line with the requirements. These are accessible directly on-site. Should the need arise, this saves

the time-intensive trip to the main distribution. Thus the mobile distributors are ideally suited as trade fair stand supply units with suspension and hang-up fixture.

In this regard, functionally and spatially they adapt perfectly to the specific requirements: Through suspension/hang-up and set-up they integrate effectively in every trade fair stand, and they can be individually fitted with CEE plugs and sockets SCHUKO®, RCD and CB switches, switch-On/switch-Off elements, load-break switches or energy meters.

MENNEKES develops mobile distributors suitable
for harsh event operation which meet the rigorous statutory
requirements, as well as individual requirements!

Event technology indoors and outdoors CEE plugs and sockets in black.

In many cases the power supply of the event area must not be visible. The technology on stage, on television or for open-air events must remain concealed from the eye of the spectator.

Here as well, MENNEKES offers suitable solutions with CEE plugs and sockets in black. The light of the spotlights is not reflected so that the CEE plugs and couplings, receptacle combinations and mobile distributors are virtually invisible. MENNEKES offers a broad spectrum of CEE plugs and sockets and CEE combinations for these special applications.

In a functional black design, like all products from MENNEKES, they are likewise configured for extreme, failsafe, continuous operation.

CEE-plugs and connectors

Receptacle combinations

Mobile distributors

Event technology outdoors configured for the harshest conditions.

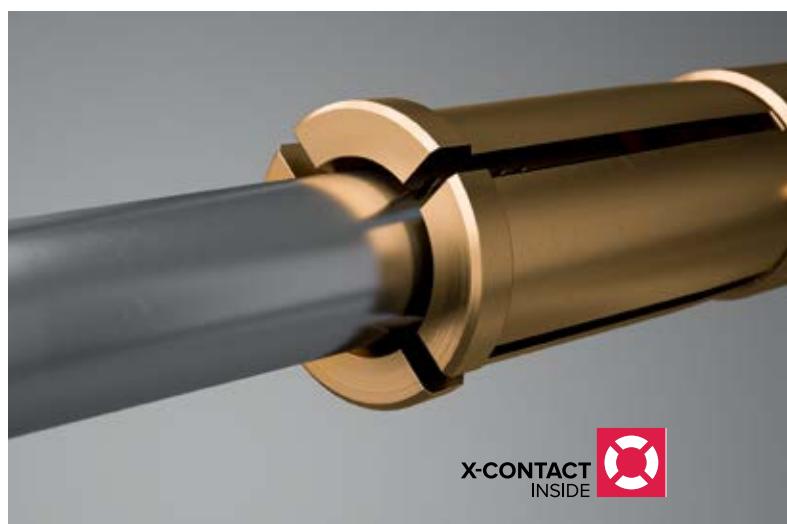

At events in soccer stadiums, for example, the plugs and sockets are subjected to the harshest conditions. For power supply of solariums for the lawn, the plugs and sockets are on the freshly-mown lawn. This means that grass cuttings can get on the contacts. The deposits then collect in the receptacle. This can cause the plugs and sockets to "deteriorate". With X-CONTACT MENNEKES has the optimal solution for this situation.

Industrial plugs and sockets for 63 A and 125 A are often subjected to the most extreme stresses: They must function reliably in spite of contamination and wet conditions. Conventional CEE plugs and sockets were always a compromise between operating convenience and contact quality: you got either the one or the other. Previously, this dilemma appeared to be unavoidable due to the physical conditions. With X-CONTACT, MENNEKES is now presenting

a system that combines the utmost reliability of the electrical connection with the utmost operating convenience. Secure contact and simple handling are now at the same high level, even at currents of 63 A or 125 A.

This is made possible through the special pretreated material, innovative workmanship, and the new shaping. Look into the opening of an X-CONTACT sleeve and you will recognize the intelligent principle: The x-shaped slotting and grooving of the inner wall offers specific advantages in the application. The new sleeves defy the harshest conditions. The interaction of spring suspension and grooving not only guarantees secure contact closure, it also offers the practical side-effect that all types of contamination will be brushed off when inserting and withdrawing. Corrosion on surfaces is also properly scraped off through the spring effect of the sleeves.

Get more information on the new generation of contact sleeves at: www.MENNEKES.com

Your superb performance is our top priority!

Highest quality – in an individual solution!

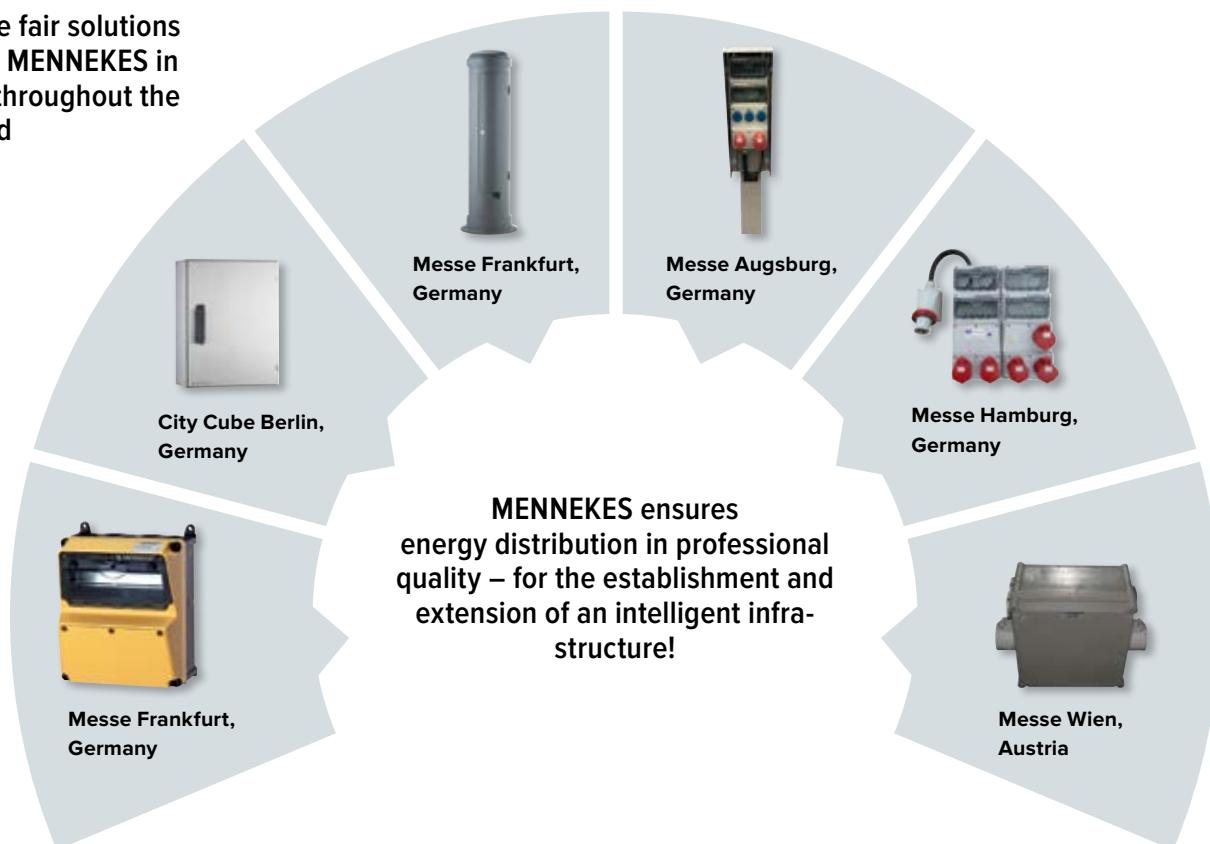

If a superb performance is involved, then in most cases individual solutions are required. This is where MENNEKES really shines, not just with the highest quality on the product level, but also in the personal support of the project. For example, the Munich Staatstheater was also individually advised and equipped with specific, custom-made solutions.

In the trade fair area, the requirements are indeed fundamentally similar everywhere – however, usually the implementation must be planned specifically and a new solution must be found due to local particularities. For example, for the outdoor area of Messe Frankfurt we implemented free-standing solutions: Here lockable energy posts and pillars with solid stainless steel enclosures were

the optimal choice. Not only protection against weather influences, but also protection against vandalism were the top priorities in this regard. A vandal-proof and robustly safeguarded access for authorized personnel only were provided in a custom-made implementation.

For Messe Wien special narrow structural shapes were desired, for which a custom-tailored implementation was provided. For the Basel Exhibition Center energy and data were implemented in a combined solution. In this regard network components were integrated in the energy distribution that enable the individual trade fair stands not only to be supplied with energy, but also with network connections at the same time.

My Power Connection Made in Germany.

Founded in 1935 in Kirchhundem (Sauerland), MENNEKES has actively accompanied the fast-paced entry of electricity into all industry sectors right up until the present day, and has influenced the industry with products and solutions for industrial plugs and sockets. And not only in Germany. With a workforce of 1,000, today the family-owned company has an international presence and is one of the leading providers in the electrical industry. MENNEKES products for industrial plugs and sockets, and electric mobility, are used in over 90 countries. Where high currents have to be transferred safely and economically, our customers and partners can always rely on MENNEKES.

And the EU too has gone for the highest quality: in 2014, type 2 charging couplers by MENNEKES were declared the standard by the European Parliament in the EU. A pioneering milestone. But we have been making more than plugs for the world for a very long time. We think holistically and create powerful connections that enable people to handle energy more innovatively and to distribute and manage it more intelligently. And because we like to think about things from the user's point of view when we are developing our products and solutions, we also communicate our performance promise from the customer's perspective:

MENNEKES – MY POWER CONNECTION.

Innovative power combined.

At MENNEKES we set ourselves the goal a long time ago of creating innovative connections between industry and infrastructure, between energy and electric mobility. Our range comprises more than 15,000 different industrial plugs and sockets, and electric mobility solutions in a variety of versions and designs. It doesn't matter whether it's a series or an individual special development, the MENNEKES brand stands for something extra right from the start – for an intelligent, sustainable solution combined with the highest quality, reliability and safety.

Intelligent e-mobility charging solutions for:

- companies
- private households
- fleet operators
- cities
- hotels
- shops and restaurants
- multi-story car parks
- landlords

Reliable plugs and sockets for:

- industrial plants
- mining
- chemical and petrochemical industries
- railway and transport companies
- shipyards
- food industry
- trade fairs and exhibitions
- data centres
- trade
- production industry
